

PRESENTON Roadmap Overview

- 03/02

Strategic
planning
focused on
template
optimization

Template Optimization Tasks

Streamlining Sopra templates and establishing clear prompting requirements for reliable AI generation

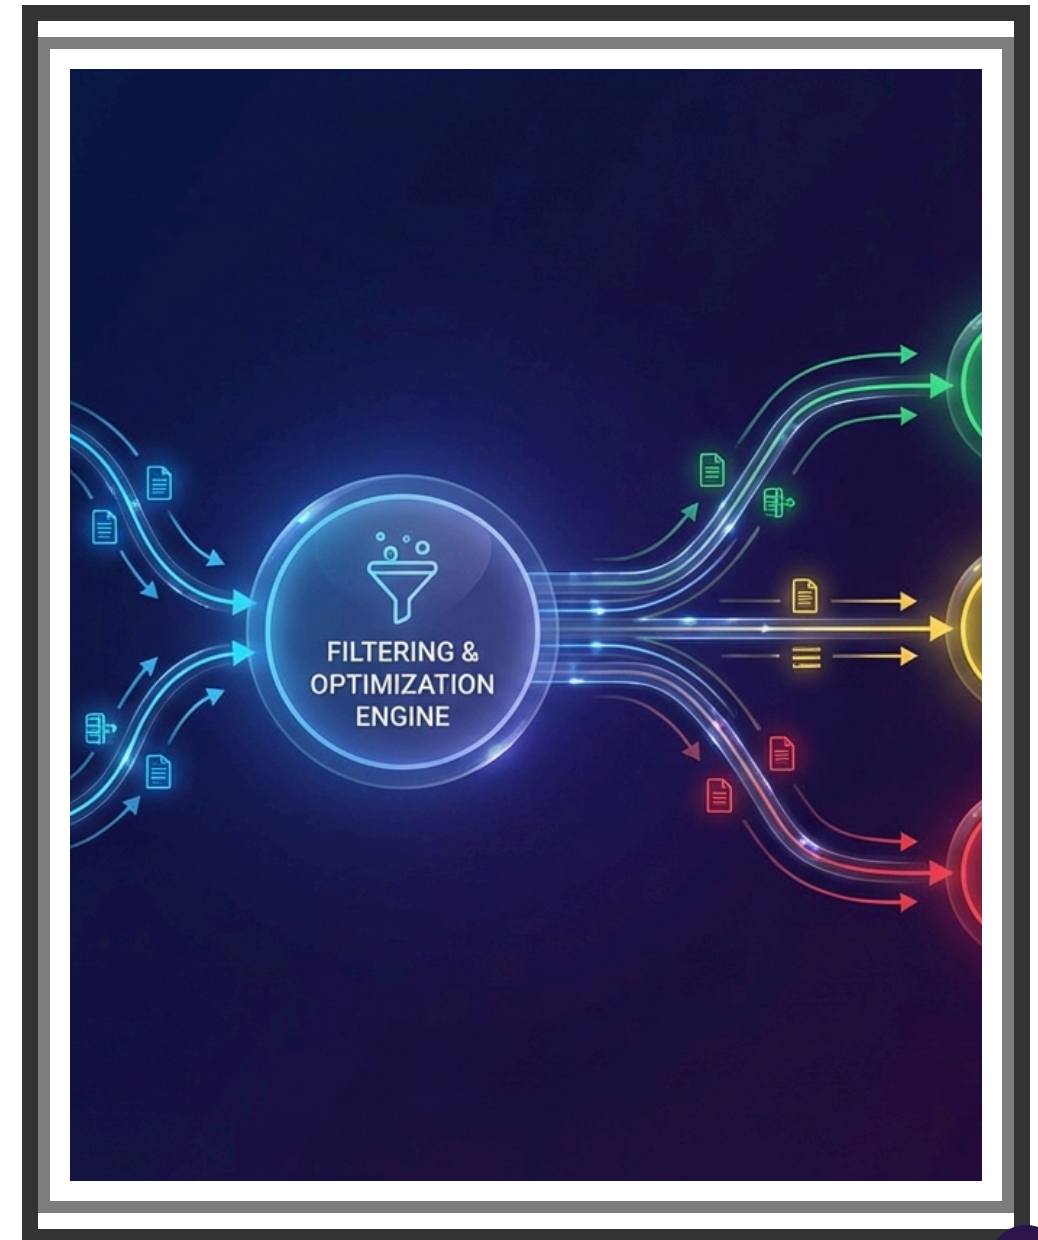

Key Focus Areas

Sopra Template Sorting

The optimization process involves filtering and retaining only the **most useful and compatible slides** from the existing template library. Overly complex templates that cause generation issues will be removed. Priority goes to templates that work reliably with AI generation, ensuring consistent output quality and reducing errors during the slide creation process.

Prompting Requirements

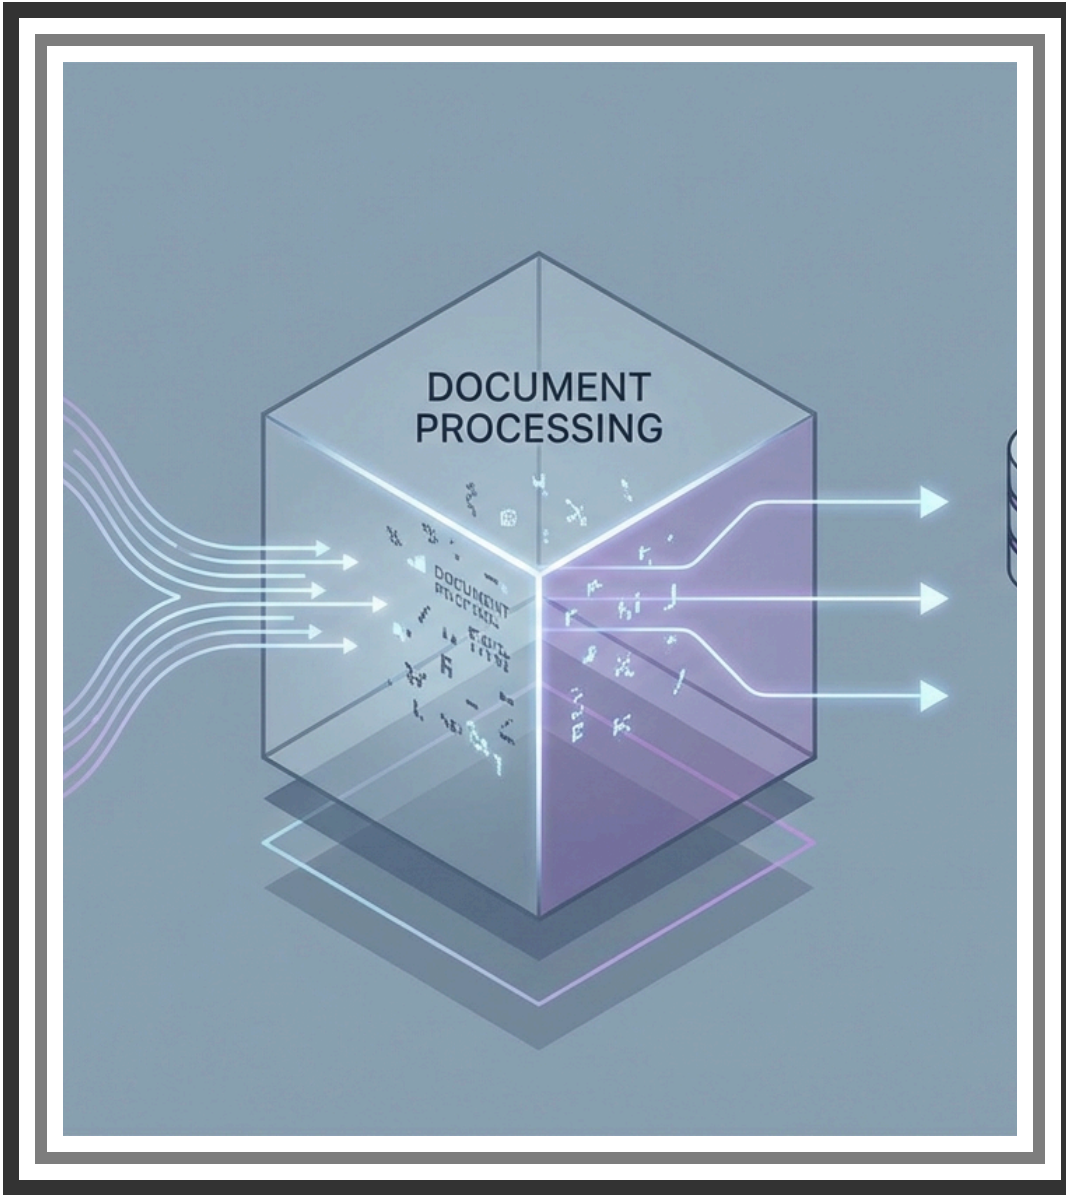

Clear input structures are essential for consistent results. Support for **TO-DO lists** and **key-value structures** will be implemented. The SYSTEM_PROMPT configurations need to be redefined and reviewed to optimize AI behavior. Well-defined input templates ensure predictable and high-quality slide generation across different use cases.

Multimodal Capabilities Development

Expanding input options for richer context and time savings

- **Current State:** Attachments can accompany prompts for richer context
- **Time-Saving Impact:** Reduces manual content preparation significantly
- **Future Development:** Enhanced multimodal processing planned
- Text extraction from attachments currently supported
- Automated extraction eliminates copy-paste workflows
- Faster presentation creation from existing documents

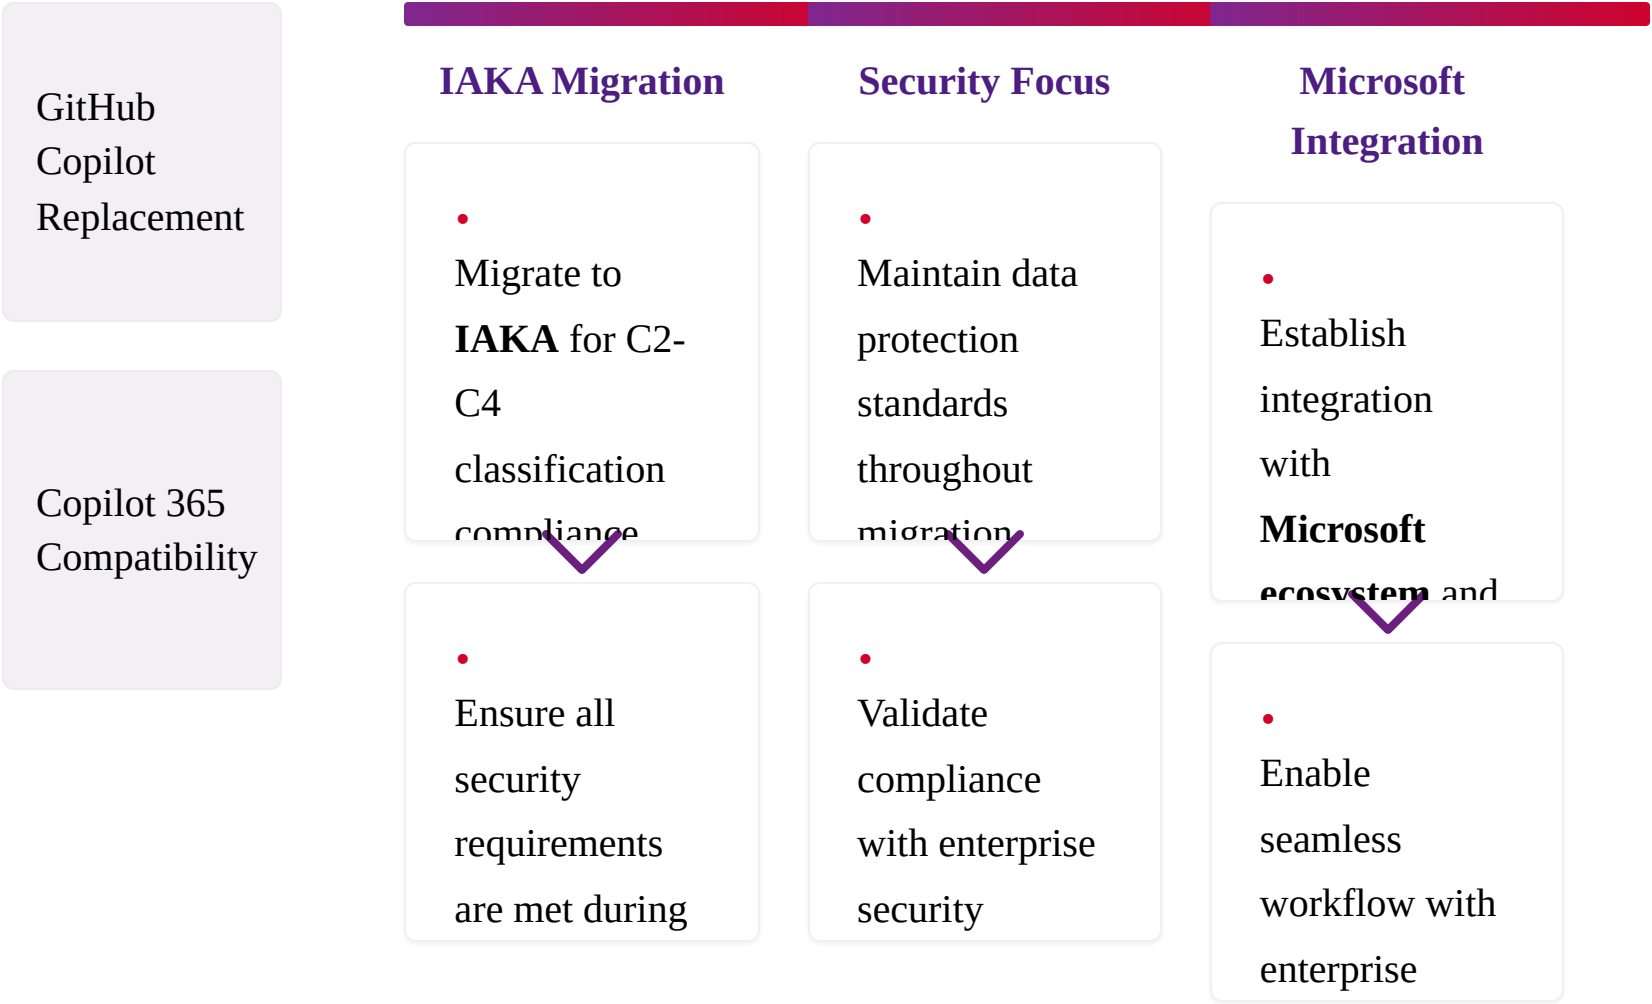

Current Technical Limitations

Known stability issues and external dependencies requiring attention in the roadmap

- **Stability Issues** affecting export and session management
 - Export problems vary by model and slide complexity
 - Session window constraints in open-code environment
 - Non-editable layouts in current version

Provider Migration Plan

Key Advantages - Efficiency

Time savings and export capabilities for productivity

1

Significant reduction in presentation creation time

2

Automated slide generation directly from text prompts

3

Quick iterations and modifications to existing slides

4

Standard .pptx export compatible with PowerPoint tools

Key Advantages - Security & Flexibility

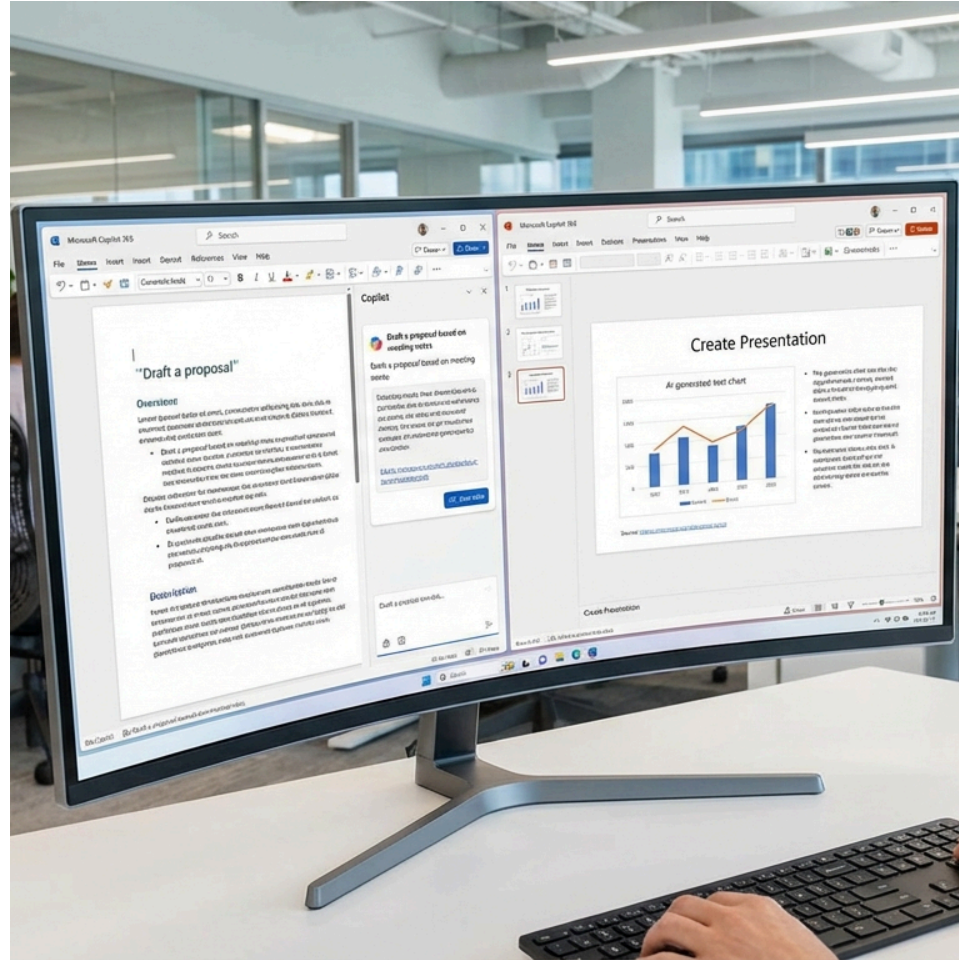

Secure local deployment with full data control and comprehensive editability options

Secure Local Deployment

- **Fork of open-source Apache 2.0 project**

Editability Options

- **Modify images and text post-generation**

Copilot 365 for AI Generation Transforming Content Creation
